

UIPATH AGENTHACK 2026 — TRACK 2 · MAESTRO BPMN

Aurora Verdict

Defensible **AML** alert triage.

Every escalate-or-close decision — cited, verified, and audit-ready by construction.

Inspired by the BIS Innovation Hub's **Project Aurora** (AML) research.

THE GAP

Problem & solution

PROBLEM

- **Thin rationale.** The recorded close/escalate reason is one line — it can't be defended when a regulator reviews it a year later.
- **Scattered evidence.** KYC, transactions, sanctions/PEP and adverse media sit in separate systems; assembling them eats the time meant for judgment.
- **Inconsistent calls.** Outcomes vary by analyst, and the high-volume low-risk bucket is a governance blind spot.

SOLUTION

- **Risk-tier BPMN flow.** Maestro routes every alert to proportional human review.
- **Validated citations.** The agent cites only real evidence IDs — invented citations are flagged before a human sees them.
- **Maker–checker on high-risk.** A challenger disputes the call · sign/override on medium · batch sign-off + 5% QA on low.
- **Conservative by construction.** Red-flag overrides + a confidence floor, and an append-only audit record.

SAML-D

OUTCOME

Cited, audit-defensible rationale — doubt always resolves
upward

HOW IT WORKS

Solution architecture

Conservative by construction: any sanctions/PEP hit, structuring pattern, or watchlist jurisdiction forces the HIGH route regardless of the agent; a confidence floor sends anything not strongly low up to a human. · github.com/dzaffren/uipath-hackathon

THANK YOU

Defensible by construction. ■

Aurora Verdict — AML alert triage, built with Claude Code on UiPath.
